

Hydraulic motor

Series MAMM

These units provide high output torque from a very small package. The motors are available in displacement from .50 in.³/rev. [8.2 cm³/rev.] to 3.05 in.³/rev. [50 cm³/rev.] The MAMM motors are fixed displacement, gerotor type units that are known for compactness and economy. All MAMM motors have built-in check valves assuring pressure on the shaft seal never exceeds pressure levels seen in the return line.

Permissible Shaft Loads For MAMM Motors

The permissible radial shaft load [Prad] is calculated from the distance [L] between the point load application and the mounting surface:

$$F_{rad} = \frac{600}{n} \times \frac{13040}{61.5 + L}, \text{ [daN]}$$

L in mm ; L ≤ 80

$$F_{rad} = \frac{600}{n} \times \frac{1155}{2.42 + L}, \text{ [lbs]}$$

L in inch ; L ≤ 3.12

The drawing shows the permissible radial load when L=20mm [0.79]

If the calculated shaft load exceeds the permissible, a flexible coupling must be used.
