

The MAT motor is six larger displacements, industry standard mounting flanges and output shafts which allows the motor to be easily applied in a wide range of applications requiring larger output shaft torque. This type motors is constant working displacement and achieve high torque at low speed.

Technical

The short motor has no output shaft or bearings. It is designed for direct mounting onto a gearbox that already has its female input shaft in bearings.

The cardan shaft of the short motor describes a tumbling motion. Consequently, the motor itself cannot be fitted with a shaft seal. The add-on component (gearbox) must be fitted with a leakage oil from flowing into the add-on unit.

The maximum permissible back flow pressure (pressure in the motor leakage oil line) is dependent on the loading capacity of the shaft seal. We always recommend fitting a leakage oil line.

The gearbox input must be designed so the leakage oil from the motor lubricates the cardan shaft profile and the bearings.

Route the leakage oil line so lubrication to the motor is still assured when it stopped. Use the tapered sealing ring supplied with the motor in order to direct the leakage oil to the lubrication.

Max. Torque 95 daNm

Shaft Loads

The tapered roller bearings on the output shaft mean it can accept high levels of axial and radial shaft load. The broken curve plots the maximum permissible radial load. Loads above and beyond this level can lead to breakage. The central solid curves plot the permissible radial loads for a theoretical service life (B10) of 3000 hours at 200 rpm. The expected service life can be calculated for different speeds and/or radial loads. This data assumes the use of a hydraulic fluid with a sufficient anti-wear additive content.

Rotation Selection

The MAT has built-in check valves. The pressure on the shaft seal is never greater than back flow pressure because of the built-in check valves. In the short motor, pressure is determined based on the technical data of the add-on components.

Max. return pressure without drain line or/ Max. pressure in drain line

rpm	Cont. (bar)
0 - 100 rpm	75
100 - 300 rpm	40
300 - 810 rpm	20
