

SECTIONAL DIRECTIONAL
CONTROL VALVES

SD 6

DS 7

SD6

Simple, compact and heavy duty designed sectional valve from 1 to 12 sections for open and closed centre hydraulic systems.

- Fitted with a main pressure relief valve and a load check valve on every working section
- Available with parallel, tandem or series circuit.
- Optional carry-over port.
- A wide variety of port and circuit valves.
- Available manual, pneumatic, hydraulic, electro-hydraulic, and remote with flexible cables spool control kits.
- Diameter 16 mm (*0.63 in*) interchangeable spools.

DLS7

They are for systems with fixed displacement pumps (open centre version), or variable displacement pumps (closed centre version), with Load-Sensing signal on each working section to pump flow control valve control.

- Load-independent flow control.
- Ports valves and "B" side control kits are the same of SD6 directional valve.
- L.S. signal connections on every working section.

Parallel circuit

Standard configuration with open centre and side inlet and outlet.

Description example: SD6/2/AC(YG3-120)/18L/18L/RC

Hydraulic circuit

Series-parallel (tandem) circuit

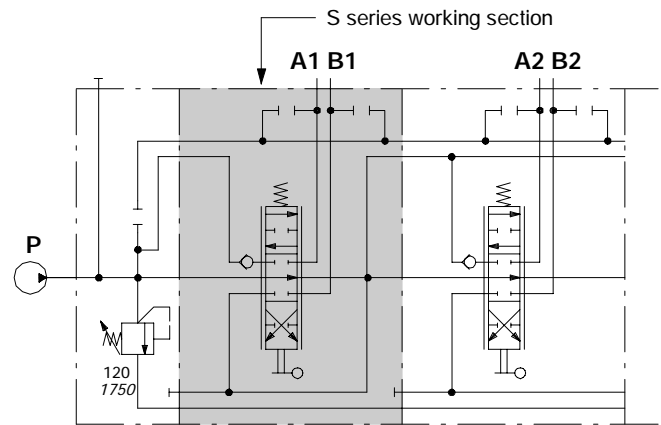

It needs a special working section kit (see page 22)
Tandem section is fed from thr free flow pressure line; it's excluded when an up strem section is operated.

Description example:
SD6/2/AC(YG3-120)/18L/SP-18L/....

Series circuit

It needs a special working section kit (see page 22).
The return oil from service ports feed the remaining down stream sections.

Description example:
:SD6/2/AC(YG3-120)/S-18L/P-18L/....

Right inlet directional valve

Description example:
SD6/2/BC(YG3-120)/18L/18L/RC

Performance data (pressure drop vs. flow)

Open centre

From side inlet to side outlet.

Inlet to work port

From side inlet to A port (spool in position 1) or B port (spool in position 2).

Work port to outlet

From A port (spool in position 2) or B port (spool in position 1) to side outlet.

NOTE - Measured with spool type 1.

Hydraulic circuit

Description example:

SD6/2/AC(YG3-120)/18L/CS1/18L/BC(YG3-120)

DFG pressure compensated flow divider section

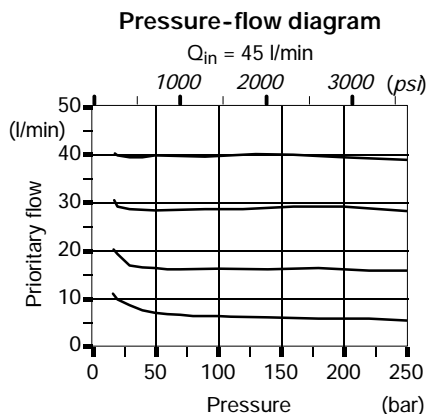

The flow on the downstream sections can be adjusted from 0 to 40 l/min by means of graduated handwheel; flow exceeding setting goes to tank.

Hydraulic circuit

Description example:
SD6/2/AC(YG3-120)/18L/DFG/18L/RC

EI service relief valve section

The operation of up stream section exclude the EI downstream section.

The pressure of the downstream sections should be adjusted at least 20 bar / 290 psi below the relief valve setting.

Execution EI2 is prearranged for a second inlet.

Execution EI1

Execution EI2

EVP3 inlet section with regulated flow

Intermediate inlet section with regulated flow priority valve and exceeding flow in pressure.

From EVP3, the regulated flow is supplied to left side working sections while the exceeding flow is supplied to right side working section.

On EVP3 is incorporate the main relief valve; the regulated flow is adjustable also with the circuit under pressure.

The working sections are assembled with two end cover, the left one is plugged (type RT code 612300112), while the right one has the tank port technical data:

Max. inlet flow = 60 l/min, max. regulated flow = 40 l/min.

Service relief valve performance data

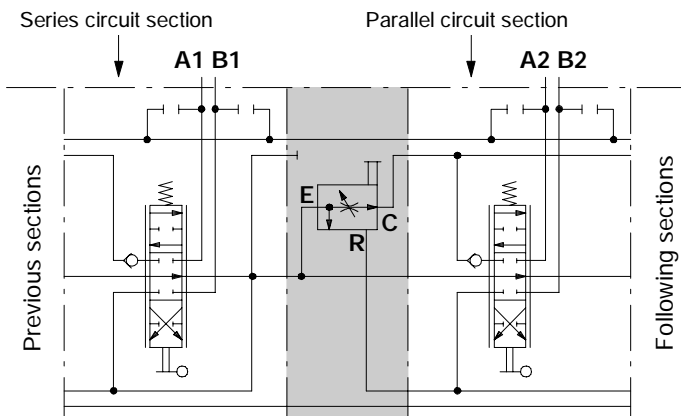

EVP9 pressure compensated flow control section

Section with pressure compensated 3-ways flow control cartridge valve.

The regulated flow is supplied to down stream sections, while the exceeding flow goes to tank.

max. inlet flow is 45 l/min, max. regulated flow is 30 l/min.

Installation and maintenance

The SD6 and DLS7 valves are assembled and tested as per the technical specification of this catalogue.

Before the final installation on your equipment, follow the below recommendations:

- the valve can be assembled in any position; in order to prevent working section deformation and spool sticking mount the product on a flat surface;
- in order to prevent the possibility of water entering the lever box and spool control kit, do not use high pressure wash down directly on the valve;
- prior to painting, ensure plastic port plugs are tightly in place.

Malfunction	Cause	Remedy
External leakage pivot box lever or control kit side.	Worn spool seal due to mechanical actuation or high back pressure.	Locate the leakage and replace the seal. Check back pressure level.
Excessive internal leakage on A and B ports.	Increase clearance between spools and body due to high wear.	Replace the working section and check the oil contamination level.
Dropping load during transition while raising.	High leakage on the load check valve.	Remove the load check valve and clean the seat, verifying it's not dented.
Inability to build pressure on A and B ports.	Pressure relief valve blocked open. Low pump pressure and flow.	Remove and clean or replace the valve. Check the pump and circuit.

Fixing brackets

They are available for SD6 and DLS7 directional valves and they are zinc plated steel, complete with mounting screws.

Note

SD6 and DLS7 valves can be supplied with one coat of black paint (CVN configuration).

Description example: SD6/2/AC(YG3-175)/18L/18L/RC-<CVN>

Description example: DLS7/2/AM(G3-120)/6V8MCLFG/6V8MCLFG/RF-<CVN>
